The trusted remote backup solution for businesses

RapidHost's Remote backup services provides you with peace of mind, and will save time and money if anything should happen to your data.

A recent Forrester report suggested that many businesses have difficulty completing backups in the time available, and a large number of backups fail or complete with errors. In addition, there are gaps in backup coverage. SMBs and enterprises often don't protect corporate PCs, and enterprises often don't protect machines at remote offices. Given the headaches associated with backup and the gaps in coverage, many organisations are now using remote back up services.

Scalability

Our remote back up service is totally scalable and can rapidly accommodate the ever increasing needs of all our users.

Reliability

Our customers know they can entrust their data to us in the knowledge that their backups will take place with minimal intervention from their side. We provide a hassle free service so that you can get on with running your business.

Security

- 256-bit length encryption for data back ups
- Private encryption key - definable by user
- AES, TwoFish and Triple DES algorithms are available

About our Remote Backup Services

RapidHost's Remote back up automatically archives files from, and selectively restores files to, all of your hosted servers PLUS all of your office or mobile computers. You can recover files securely from anywhere on the internet. It is the ideal way to protect business and personal data against equipment failure, theft, virus damage or accidental deletion/corruption.

Our intelligent archiving system only saves data files that have changed since the last backup, thus saving running time. The backup process can be scheduled to run at a time when you are not using your computers for work (provided the computer is left online & connected to the Internet.)

In addition, the frequency of backups can be set from weekly/daily right down to hourly or even every minute. For especially volatile files/databases a Continuous Data Protection (CDP) mode is available that ensures total data protection without the overhead of saving less volatile files at the same time.

Performance & Flexibility

- Our intelligent archiving system only saves data files that have changed since the last backup, thus saving running time
- For especially volatile files/databases a Continuous Data Protection (CDP) mode is available that ensures total data protection without the overhead of saving less volatile files at the same time

Ease of Use

- The backup process can be scheduled to run at a time when you are not using your computers for work (provided the computer is left online & connected to the Internet)
- The frequency of backups can be set from weekly/daily right down to hourly or even every minute

A Cost Effective Service

Backup Quota	Monthly Fee
5 GB	£14.75
10 GB	£22.50
20 GB	£40.00
50 GB	£80.00
100 GB	£140.00
200 GB	£260.00
over 200 GB	POA
Hard Disk 'Seeding'*	£100.00 (per cycle)

- *NOTE - a setup fee of £30 is payable unless Rapid Backup is ordered as part of a hosted server contract*
- *All prices exclude VAT*
- **Hard disk 'seeding' is a process to speed up an initial backup or restore in the full version where large volumes of data (20GB or more) are involved. In 'seeding', RapidHost will ship a hard disk to you to copy on/off the large amount of data at direct connection speed, after which you return the disk to RapidHost*

About RapidHost

RapidHost has been delivering internet hosting, backup and email services since 1999. In that time it has built up a customer list numbering over 600.

RapidHost offers a complete 24x7 managed service environment from secure data centres located in the UK, as well as added-value services related to hosted solutions. Technical support is provided by 'real people' on a 24 hour basis sharing a common technical management platform.

Our service range includes:

- Domain Management
- Server Hosting
- Complex Systems Hosting
- Managed Application Services
- FileMaker Services
- Data Archiving Services
- Co-Location Services
